

TRIMSEAL

Clear Control Surface Sealing Material

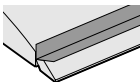

DAVE BROWN PRODUCTS INC.

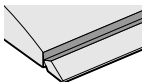

TRIMSEAL is intended to seal the gap inherent in hinged control surfaces. We recommend sealing the control surfaces as it increases control effectiveness as well as curing many trim problems. Trimseal is applied in the gap created by hinged control surfaces. It can be applied directly over a painted surface provided that care is taken to avoid using excessive heat which could blister the paint. It turns crystal clear when applied. To apply, cut a strip of sufficient width and fold it in half, dull side out, creasing the fold as shown below. Inserting it into the gap, tack both ends with a pointed sealing iron before carefully ironing it down the full length. Trim it flush with the surfaces front and back.
